

Akash Jain

Senior Full Stack Engineer | Java · Kotlin · Spring Boot · React · TypeScript · Distributed Systems · Azure (AKS)
Oslo, Norway · +47 47 74 11 78 · jainakash.11@gmail.com · linkedin.com/in/jainakash2108 · github.com/jainakash2108
Certifications: Azure Developer Associate · Azure Fundamentals · GitHub Foundations · OAuth 2.0 · Docker · Kubernetes

PROFESSIONAL SUMMARY

Senior Full Stack Engineer with 14+ years of experience building scalable, fault-tolerant microservices and modern web applications across logistics, payments, and enterprise domains.

Strong in Java and Kotlin (Coroutines, modern concurrency incl. Virtual Threads), Spring Boot, React/TypeScript, and event-driven architectures with Kafka.

Cloud-native delivery on Azure (AKS, PostgreSQL Flexible Server, Azure AD) with focus on reliability (idempotency, retries/backoff, circuit breakers), security (OAuth 2.0 / OIDC), observability, and performance.

Hands-on with AI-assisted development (GitHub Copilot, Claude/Opus, Codex) and GenAI patterns (RAG/enterprise search) to improve developer productivity safely.

Proven end-to-end ownership from Jira requirements through deployment; effective collaborator and mentor in cross-functional agile teams.

KEY HIGHLIGHTS

- Designed services used by 7M+ users and processing millions of daily parcel events (tracking, sharing, notifications).
- Reduced API failure retries by ~90% by designing a distributed retry engine with exponential backoff and safe rescheduling.
- Eliminated duplicate mobile charges by implementing idempotency keys and safe retry behaviour in payment flows.
- Led migration of a 500 GB on-prem database to Azure PostgreSQL Flexible Server with minimal downtime and zero data loss.
- Improved response times by 40–60% across critical services by resolving DB bottlenecks and tuning runtime behaviour.
- Delivered zero-downtime cloud migrations using blue-green deployments and NGINX reverse proxy traffic shifting.

TECHNICAL SKILLS

- Languages: Java, Kotlin (Coroutines), TypeScript, JavaScript, PL/SQL, Unix Shell
- Concurrency: Kotlin Coroutines, Java Virtual Threads (modern concurrency), async/non-blocking patterns
- Backend: Spring Boot, REST API design, Microservices,DDD, TDD/BDD, SOLID, JetBrains Exposed, Spring Batch/Integration
- Frontend: React, TypeScript, component-driven UI, API integration
- Payments: Vipps, NETS, Adyen (recurring/scheduled flows, idempotency keys, safe retries)
- Identity & Security: OAuth 2.0/OIDC, Vipps Login, Azure AD integration, GDPR, vulnerability management
- Messaging/Streaming: Kafka, Azure Event Hub, Azure Service Bus, IBM MQ
- Databases: PostgreSQL, Oracle, Liquibase, query optimisation, schema refactoring

- Cloud/DevOps: Azure (AKS, AD, Flexible Server), Docker, Kubernetes, GitHub Actions, Azure DevOps, TeamCity/Jenkins, Maven/Gradle
- Reliability/Observability: circuit breakers, retries/backoff, bulkheads, blue-green deployments, monitoring, distributed tracing, metrics dashboards
- GenAI (hands-on): RAG patterns, embeddings, enterprise search, prompt engineering; tools: Copilot, Claude (Opus), Codex
- Tools: Git, GitHub, Jira, IntelliJ IDEA

SELECTED PROJECTS

- Payments (Adyen/NETS/Vipps): secure payment flows with recurring/scheduled payments; implemented idempotency and safe retries to prevent double charges.
- Identity (Vipps Login + OAuth 2.0/OIDC): login integration and service-to-service auth with Azure AD applications.
- Distributed Retry Engine: PostgreSQL-backed retry queue with exponential backoff and scheduled execution using ShedLock.
- Parcel Tracking & Sharing (consumer app): real-time Kafka ingestion, parcel lifecycle tracking, and secure parcel sharing with pickup permissions.
- Cloud + data migrations: AKS migration with blue/green cutovers; 500 GB PostgreSQL migration to Azure Flexible Server with minimal downtime.
- Modernisation: Java→Kotlin migrations and JavaScript→TypeScript migrations to improve maintainability and correctness.

PROFESSIONAL EXPERIENCE

Posten Bring AS — Senior Software Developer / Full Stack Developer (via TCS)

Nov 2019 – Present

Oslo, Norway

Technologies: Java, Kotlin, Spring Boot, Kafka, PostgreSQL, Liquibase, React, TypeScript, Azure (AKS, AD), Docker, Kubernetes, GitHub Actions

- Designed, built, and owned services for parcel tracking, sharing, user services, delivery instructions enrichment, rewards, notifications, and feedback (7M+ users).
- Built real-time parcel event ingestion with Kafka and ensured reliable processing across the parcel lifecycle.
- Integrated payments with Adyen, NETS, and Vipps (including recurring/scheduled flows) and enforced idempotency + safe retries to prevent double charges.
- Implemented login integration using Vipps Login and configured Azure AD applications for secure internal service-to-service authentication.
- Led migrations to AKS and PostgreSQL Flexible Server; executed blue-green deployments and NGINX-based traffic shifting for zero downtime.
- Standardised database change management via Liquibase in CI/CD, improving release safety and reducing manual steps.
- Delivered performance and reliability improvements (SQL tuning, pooling, caching, circuit breakers) to reduce latency and prevent cascading failures.
- Security Champion: vulnerability triage/remediation, monitoring strategy, and disaster recovery planning + hands-on DR exercises.

- Mentored peers on clean code, SOLID, and system design; contributed to platform modernisation and pipeline improvements.

Barclays Investment Bank — Java Developer (via TCS)

Mar 2017 – Oct 2019

Pune, India

Technologies: Java, Spring Batch, Spring Integration, Oracle, PL/SQL, IBM MQ, TeamCity, Jira, JBehave

- Built Spring Batch/Integration services to process high-volume financial transactions via IBM MQ.
- Improved Basel III regulatory reporting by resolving cashflow, payment, and ledger processing delays.
- Implemented BDD testing with JBehave to improve regression safety and clarify transaction flows for stakeholders.

Credit Suisse — Java Developer (via TCS)

Jan 2016 – Feb 2017

Pune, India

Technologies: Java, EJB, PL/SQL, Oracle, Control-M, Unix

- Enhanced invoicing systems and automated batch workflows using Control-M and Unix scripts.

Expedia Group — Java Developer (via Cognizant)

Oct 2015 – Jan 2016

Pune, India

Technologies: Java, Spring, Oracle, Maven, Git

- Integrated airline partners and improved booking workflow stability by resolving connectivity and data consistency issues.

British Airways — Java Developer (via Cognizant)

Feb 2012 – Sep 2015

Kolkata, India

Technologies: Java, Struts, Oracle, Unix, Jenkins, Maven

- Enhanced reporting workflows and automated internal processes, collaborating closely with business stakeholders.

American Express — Java Developer (via Cognizant)

Dec 2011 – Jan 2012

Hyderabad, India

Technologies: Java

- Developed backend modules to automate customer data upload and processing workflows.

CERTIFICATIONS

- Microsoft Certified: Azure Developer Associate
- Microsoft Certified: Azure Fundamentals
- GitHub Foundations
- The Nuts and Bolts of OAuth 2.0
- Docker for the Absolute Beginner – Hands On – DevOps
- Kubernetes for the Absolute Beginners – Hands On

- Build search and recommendations applications with AI Applications

EDUCATION

Bachelor of Engineering (Computer Science) · 2007 – 2011

AWARDS

- TCS AI Spark Award
- On The Spot Award (x2)
- Special Initiative Award
- ICON of T&H
- Contextual Master Award
- Service & Commitment Award
- Learning Achievement Award

LANGUAGES

- English (Fluent / Full professional)
- Hindi (Native)
- Norwegian / Bokmål (Elementary, A1)
